

There are three (3) questions.

All questions are of equal value (10 marks each).

CLOSED BOOK: textbooks, notes, problems, etc., are not permitted.

Calculators are permitted.

Wherever necessary a FBD must be drawn.

**STRAIGHT EDGE IS REQUIRED.
UNDERLINE YOUR ANSWERS.**

Answer all questions in the answer booklets provided:

Indicate the Following on the Front of your Answer Booklets

Name : _____

Student Number : _____

Group# (Dr. Polyzois class only) _____

Distance Education Students: Indicate that you are in the Distance Ed. Class

$$a^2 = b^2 + c^2 - 2bc \cos A$$

$$b^2 = a^2 + c^2 - 2ac \cos B$$

$$c^2 = a^2 + b^2 - 2ab \cos C$$

$$\frac{a}{\sin A} = \frac{b}{\sin B} = \frac{c}{\sin C}$$

$$g = 9.8 \text{ m/sec}^2$$

QUESTION 1

A large truck is stuck on the centerline of Fermor Avenue as shown. A single tow truck is brought in but it cannot move the large truck as shown in Figure 1(a). A force of 45 kN directed along the centerline of Fermor is required to move the large truck. A second tow truck is brought in. The two tow trucks are now attached as shown in Figure 1(b).

Determine the magnitude of the tension in each of the tow cables AB and AC when the large truck begins to move.

- By means of a graphical solution (state the scale that you use),
- By means of a trigonometric solution applying the sine and/or cosine rules, and
- By rectangular components.

**Figure 1(a)****Figure 1(b)**

QUESTION 2

A Free Body Diagram (FBD) of a truss joint in equilibrium is given in the Figure 2 below. Determine the magnitudes and the directions of forces F_1 and F_2 .

**Figure 2**

QUESTION 3

Two cranes are used to lift two masses, $M1$ and $M2$ using a set of five cables (AC , AB , BD , AE and BF) attached as shown in the figure. Cable AB is horizontal.

What would be the maximum combined mass ($M1 + M2$) that the two cranes can lift if the maximum force that any one of the five cables can carry is 100 kN ?

Use $g = 9.8\text{ m/sec}^2$
